Oak Garden Machinery is offering Revolutionising ATV & Asset Security

What can we protect?

A discreet ATV and asset tracker that monitors the movements of your machinery in real-time, allowing you to view status and location history 24/7 with notification of unauthorised movements.ry are offering ATV & Asset Security via ATV TRAC

So how does it work?

Installation

Through our experienced dealer network, your unit will be professionally and covertly installed, with true peace of mind.

Registration

Once your device has been installed, simply complete the registration process and you'll be protected within minutes.

Tracking

Once you've registered you can **log-in** 24/7 to check your vehicles real-time location, battery level, journey history and more.

Key features

Stealth Installation

All authorised ATVTrac dealers are trained to ensure that your unit is installed in the most covert location possible, giving the best levels of protection and adhering to Thatcham's high security standards - it's essential.

24-7 Operations Center

Our secure operating centre doesn't sleep, so you're protected 24 hours a day, seven days a week. If the unthinkable happens, our team contact you via text, phone and email and then liaise directly with the authorities to pinpoint your machine.

ATV Over Alerts

Ideal for lone workers, ATVTrac will notify your selected contacts automatically should the unit detect the machine is over.

Self Maintaining

ATVTrac has its own internal battery, so it doesn't rely solely on the machine's own battery for power. If it detects a drop in the machine's voltage, you'll receive a helpful text to tell you so. The internal battery lasts for up to 30 days.

Real-time Monitoring

Once you've registered your ATVTrac unit you have total control, 24/7. Edit your details, add co-workers for notifications and even select the voltage threshold for receiving low battery notifications. Sending a lone-worker out on a remote job? Keep an eye on their location for peace of mind or send your nearest machine to the next job by monitoring more than one tracked machine on the app.

Records Journeys

Journeys are logged on ATVTrac's interactive map so you can log in, view and share the routes that you have taken and get detailed information such as distance and time.

Thank you for your business
